Harbour

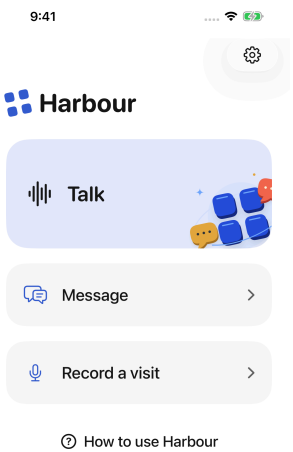

On-device health support

A native iPhone prototype for older adults and the people helping them.

CSI4900 · Honours project · November 2026

Interfaces

Simple mode and caregiver tools share the same saved records.

Request processing

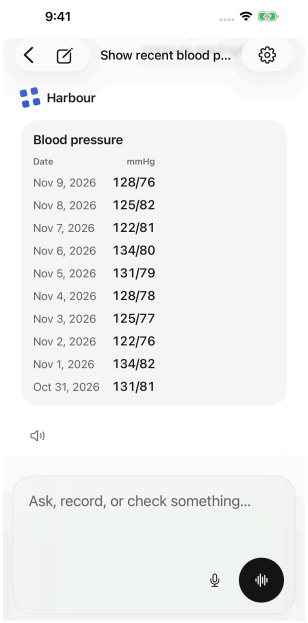

Speech or text → local model → source checks

Read saved data, or open the existing editor.

Record changes require confirmation.

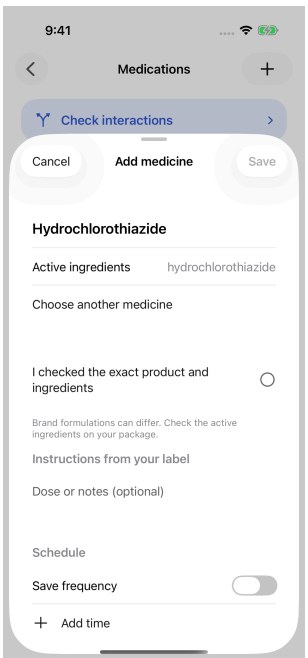

App walkthrough

Actual native app · fictional saved data · real local chat inference

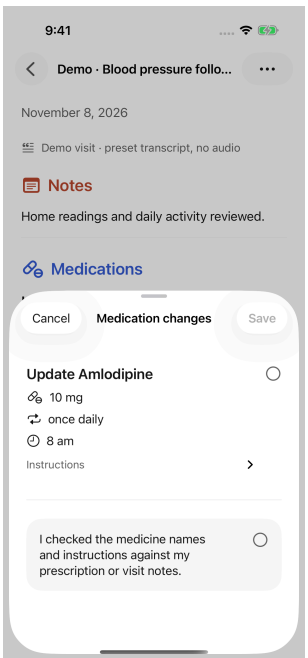

Medication names

8,299 English/French entries · Health Canada DPD

Visit review

Saved demo summary · authored fixture, not a live extraction result

Text evaluation

Check	Alex · 0.5B	Sam · 1.5B
Correct complete outcome	14/16	14/16
Negated requests routed correctly	0/2	0/2
Negated writes blocked by validation	2/2	2/2

153 deterministic core tests pass. This 16-case model subset does not measure speech accuracy or visit-summary quality.

Further evaluation

- Usability with older adults and caregivers
- Canadian English and French speech, including medication names
- Negation, timing and follow-ups on unseen visit transcripts
- Latency and memory across real phones
